Index to contents — 1963

NEWS STORIES AND FEATURE ARTICLES in the 26 issues of PULP & PAPER published in 1963 are listed here alphabetically. We think you'll see by the number of categories how extensively your magazine reported and analyzed industry developments last year, as in every year.

Topics have been alphabetically cross-indexed, too. For example: A story describing the start-up of a new mill or machine can be located under "Mill Stories," and also under "Growth," since the start-up represents industry growth. When a news story or feature can be further broken down—in the case of a new mill or machine, into stock preparation, papermaking, finishing, etc.—that portion of the story will appear also under the specific category. Another example: An exclusive interview with Max Bardeen (Sept. 2, p. 37) appears under "Business" because

of the general character of the story, but also under "Public Relations" because Mr. Bardeen spoke about improving the industry's image.

Two of PULP & PAPER's regular features—"Mill Operations" and "How to do it"—are listed under those headings and also under topic headings.

Charts, graphs and other business data can be located under "Production & Economic Data." Mergers are under "Growth" or "Business," or both.

"Paper & Board Manufacturing" contains stories ranging from the headbox to rewind. Stock preparation is under that heading, coating, finishing and materials handling (rolls and sheets) under those categories.

The editors would appreciate your comments on the effectiveness of this new index.
